

BAXI

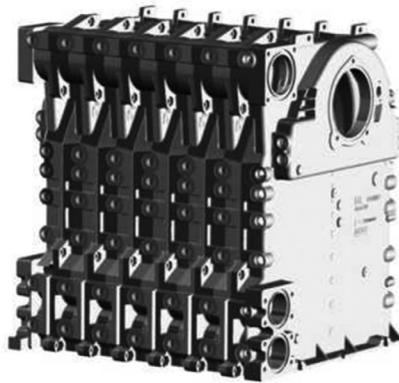

Power HT-A

Power-A HT 1.135÷1.650

The ranges of high output floor standing boilers POWER HT and POWER HT-A consist of condensing heat generators for heating only, with output between 121 and 651 kW (50/30°C).

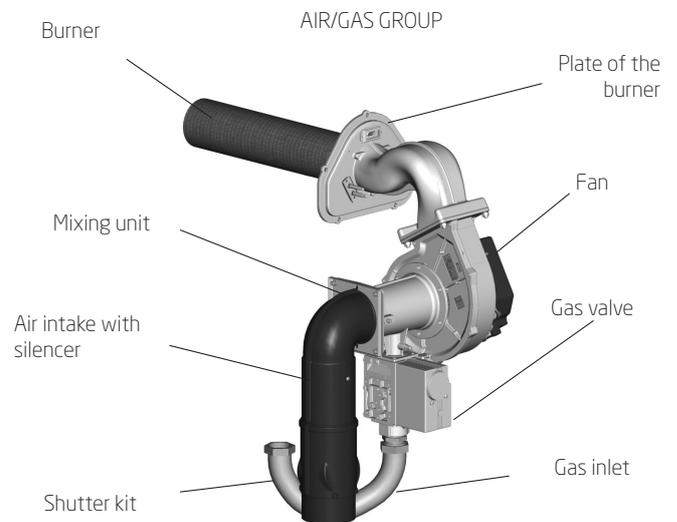

The range is made of ten models and the main features are:

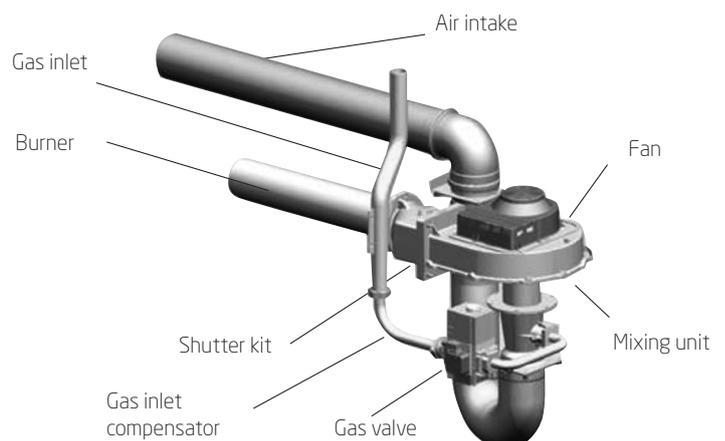

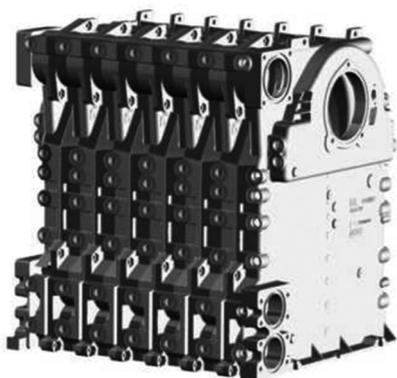

- nominal **efficiency** 50/30°C up to **109,7%**;
- modulation ration **1:6 Power HT-A up to 320 kW** and **1:5 Power HT-A 430-650 kW**;
- **high efficiency Aluminium-Silicon exchanger**, developed using the latest simulation techniques to optimise flows of the gas flue and water in the primary circuit. The special shape of the exchanger distributes the heat evenly by irradiation in the upper part of the exchanger. In the central part heat is transmitted by convection. The distance and shape of the grid of cylinders produces uniform and efficient heat transmission.
The gas flue is condensed in the lower part of the exchanger. Here the flue gas, depending on the modulation, is cooled almost to the temperature of the return water of the primary circuit. This way the thermal energy is used up, apart from the 1-2% of inevitable physical loss.
- **over-sizing** of the **water circuit** so that hydraulic pressure drops are reduced as are the dangers resulting from scale obstructions;
- relatively low water content inside the exchanger that means very limited thermal inertia and therefore a rapid response to the variations in thermal energy required by the system;
- heat **insulation in glass wool** minimises heat dispersion outwards;
- **cylindric burner** made from steel fibre with length depending on the output of the boiler. This results in resistance to high temperatures, a very short flame edge for optimal irradiation of the heat and to minimise the formation of NOx, and a uniform distribution of the air/gas mixture along the entire modulation range length depending on the boiler output);
- **premixing air-gas unit** ensuring that the burner constantly has an optimal air/gas ratio independently from the number of fan revs, keeping consumption to a minimum and always guaranteeing correct combustion and consequently a reduction in polluting emissions;
- functioning independently of the environment air (the air-flue duct is fully separated from the installation room);

- **check valve on the air-flue circuit** that enables installation in cascade without having to apply an external flue shutter;
- **digital PCB with latest generation double microprocessor**;
- control panel with large back-lit LCD;
- built-in climatic regulation (outdoor sensor included)
- **electronics that allows great flexibility** in highly diversified contexts. With specific accessories that can also be installed inside the boiler, it is possible to control mixing zones, daily and weekly programming of heating and sanitary functions, cascade, recirculation and other functions;
- 0-10 V control available as optional;
- operation with **natural gas** or **LPG** (135-320 kW);
- easiness of use and installation.

Single installation electronics

All the control, management and communications software (meaning the whole intelligent part of a heating system) resides in the boiler PCB.

Main features:

- Double microprocessor: latest generation software for control of the generator, or also of a complete heating system
- Management of primary circuit pump modulation by PWM controller
- Daily heating programme and generation of domestic hot water
- Electronic thermometer
- Automatic troubleshooting: signalling and description of possible anomalies
- Built-in climatic regulation (outdoor sensor included)
- Automatic summer/winter changeover with outdoor sensor connected
- Preset for installation in cascade with control software included in the PCB
- Preset for installation in mixing systems

LCD control panel is supplied as standard

Programming, setting and digital control

	Model	Description	Code
A white electronic module with multiple terminals and a barcode.	Programmable internal module THINK (AVS75)	A heating system with max 16 boilers in cascade can be run, with separate storage for hot sanitary water where required. This accessory, connected to one of the boilers, can directly control the circuit components up to a max of 3 independent relay outlets, 2 inlet temperature sensors, 1 connector for limit thermostat in HV and one control inlet (for example TA). Up to 2 modules installed inside the boiler, for third mixing zone order Programmable external module THINK (AVS75) cod. 7105037	7213872
A small electronic device with a ribbon cable attached.	Interface kit for boilers in cascade THINK (OCI345)	Interface kit for boilers in cascade is an electronic device that permits communication via bus (two cables) between boilers connected in cascade or between one boiler (or the boilers in cascade) and a mixing zone controller.	7104408
A rectangular electronic control unit with various ports and a barcode.	Heating controller for mixing zones THINK (RVS46)	Heat regulation control unit to control a mixing zone (usually low temperature). It can run a mixing valve, a pump and the flow sensor of the controlled zone. It can also exchange data with the boiler board by means of the connection bus. It includes a flow/return sensor THINK.	7105199
A coiled metal sensor cable with three wires at the end.	Hot water temperature sensor	This is the sensor that detects the DHW tank temperature - length: 6 meters.	LSX 71000002
A coiled metal sensor cable with three wires at the end.	Sensor for solar controller	Sensor connected to the electronic platform THINK that detects the temperature of the solar collectors.	LNC 71000004
A black square sensor module with a small protrusion on the side.	Heating flow/return sensor THINK (QAD36)	This sensor is necessary to detect the flow temperature of the mixing zones in the heating plant. It have to be connected to the AVS75 or RVS46.	KHG 71407891

Flue system - single installation

Flexible and easy installation of the boiler is possible using the accessories provided. The air/flue pipe is fully isolated from the installation room. The flue connection is positioned at the top of the boiler, while the air intake is on the bottom, at the back. In any case, both the positions of the flue discharge and of the air intake can be easily modified as shown in the diagram below. Specifically, the flue discharge can be moved to the lower back or lower side of the boiler using a 90° bend, while the air intake can be moved to the side at the bottom.

Power HT-A 1.135÷1.320

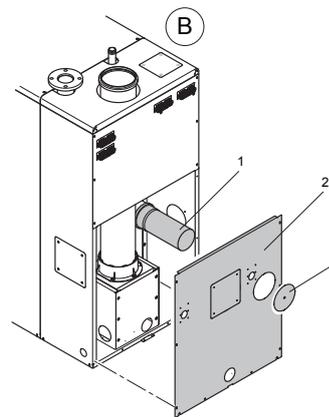

1. Remove lower rear wall (2) of the Power HT-A
2. Remove the gas connection leading upward and insert a 90° bend (1)
3. Turn 90° bend (1) in the desired position (side or towards the rear)
4. Remove either the rear cover plate (3) or the side cover plate (4)
5. Mount lower rear wall (2)

Side supply air connection (A)

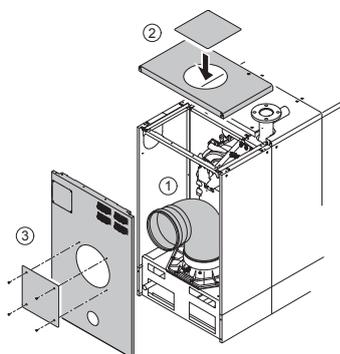

1. Remove lower rear wall (3)
2. Remove the covering panel (2)
3. Mount the bend of the intake pipe (1)
4. Turn intake pipe elbow into the side position (1)
5. Mount lower rear wall (3)

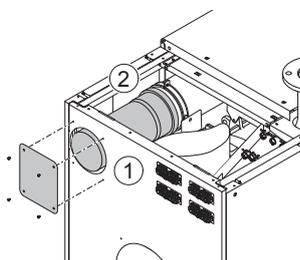

Rear supply air connection (B)

1. Remove lower rear wall (2)
2. Take out cover plate (3)
3. Mount straight intake pipe
4. Mount lower rear wall (2)

Power HT-A 1.430÷1.650

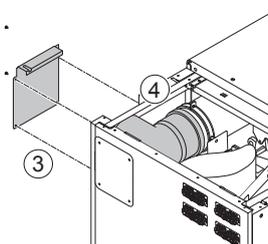

1. Remove upper and lower rear panel of the Power HT-A
2. Remove the flue connection leading upward (2) and insert a 90° bend (1)
3. Mount the cover plate (2)
4. Remove the back cover (3)
5. Mount upper and lower rear panel of the Power HT-A

Rear supply air connection (A)

1. Remove the upper panel
2. Take out cover plate (1)
3. Mount straight intake pipe (2)
4. Mount the upper panel

Side supply air connection (B)

1. Remove the upper panel
2. Remove the side covering panel (3)
3. Mount the bend of the intake pipe (4)
4. Mount the upper panel

The boiler can be easily installed thanks to the flue accessories provided by BAXI, which offer a great flexibility of use. The product is certified for the following flue types:

B₂₃ – C₁₃ – C₃₃ – C₄₃ – C₅₃ – C₆₃ – C₈₃-C₉₃

C₆₃ The maximum pressure drop in the pipes ΔP not provided by BAXI must not exceed the values given in the table below.

Flue type	C ₆₃	
	Fan pressure drop [Pa]	Flue pipe Ø [mm]
Power HT-A 1.135	100	160
Power HT-A 1.180		
Power HT-A 1.230	100	200
Power HT-A 1.280		
Power HT-A 1.320		
Power HT - A 1.430	180	250
Power HT - A 1.500		
Power HT - A 1.650		

In case of installation of flue pipe not provided by BAXI, the pipes must be certified for this type of use and for a temperature higher than 120°C.

C₅₃ The maximum length of the dual inlet/outlet pipes provided by BAXI are shown in the table below.

Flue type	C ₅₃	
	Flue Ø [mm]	Maximum length L[m]
Power HT 1.135	160	60
Power HT 1.180		
Power HT 1.230	200	60
Power HT 1.280		
Power HT 1.320		
Power HT - A 1.430	250	50
Power HT - A 1.500		
Power HT - A 1.650		

For flue pipes provided by BAXI (flue type C₅₃):

- the insertion of a 90° bend reduces the total length of the pipe by 5 meters.
- the insertion of a 45° bend reduces the total length of the pipe by 2 meters.
- the insertion of a 15° bend reduces the total length of the pipe by 1 meter

Note: the minimum slope of the flue pipe toward the boiler must be 5,5 cm every meter of length.

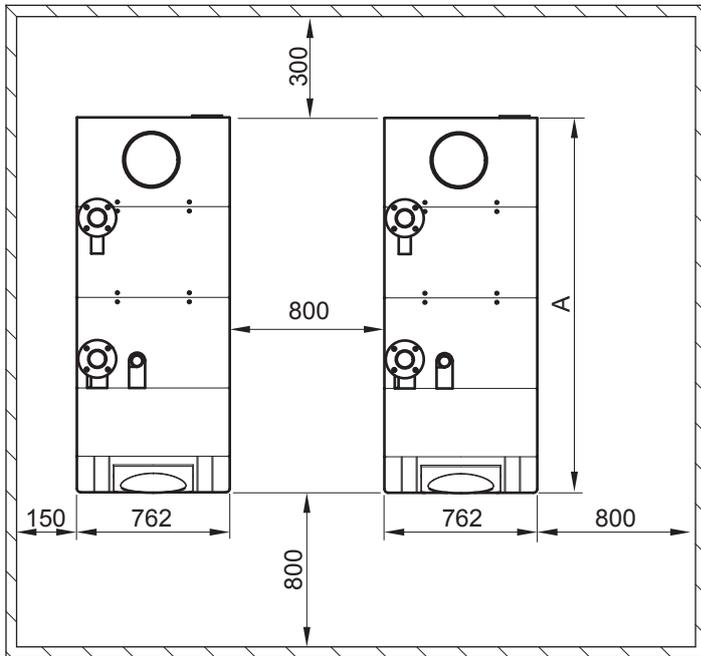

Pipes maximum lengths are subjected to technical evaluation and must meet the requirements of the prevailing installation standards in the country.

Cascade installation

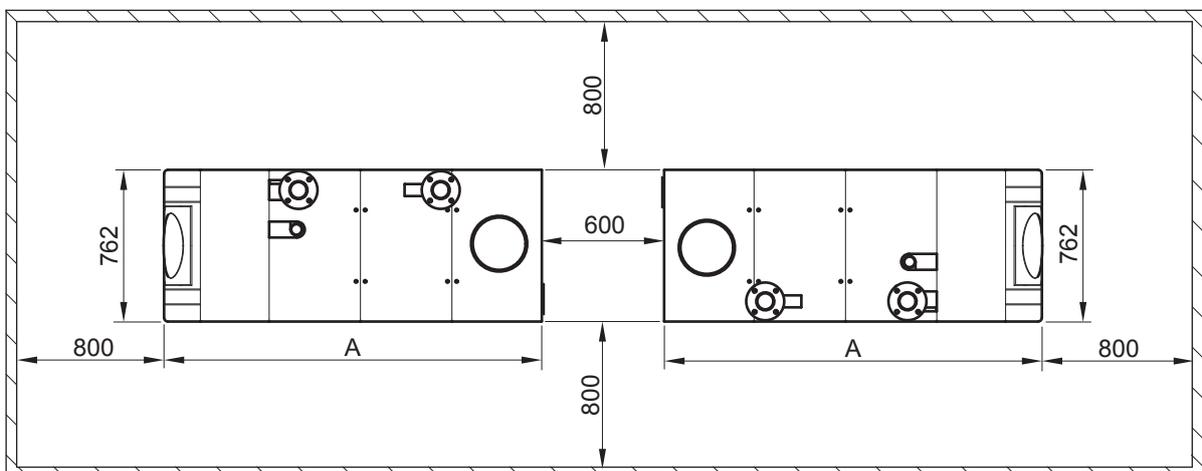

High output condensing boilers Power HT-A can be installed in cascade, up to 16 boilers controlled with the same electronics.

Clearance dimensions

Power HT-A 1.430÷1.650

Model		A
Power HT-A 1.430	mm	1882
Power HT-A 1.500	mm	2192
Power HT-A 1.650	mm	2192

Flue system - cascade installation

The table below shows the maximum diameters and lengths of the flue pipes for various configurations of boilers in cascade. Every boiler is equipped with a check valve on the air-flue circuit that enables installation in cascade without having to apply an external flue shutter kit.

Model	N° boilers in cascade	Flue maximum length [m]	Diameter [mm]	Fan speed [m/sec]
Power HT 1.135	2	40	180	< 5
	2	60	200	< 5
	3	30	200	< 5
	3	60	250	< 5
Power HT 1.180	2	40	200	< 5
	2	60	250	< 5
	3	60	250	< 5
Power HT 1.230	2	20	200	< 5
	2	60	250	< 5
	3	20	250	< 5
	3	60	300	< 5
Power HT 1.280	2	50	250	< 5
	3	60	300	< 5
Power HT 1.320	2	50	250	< 5
	3	60	300	< 5
Power HT-A 1.430	2	30	250	< 6
	2	40	300	< 5
	3	30	300	< 6,5
	3	40	350	< 5
Power HT-A 1.500	2	17	250	< 7
	2	40	300	< 5
	3	40	350	< 5,5
	3	40	400	< 5
Power HT-A 1.650	2	30	300	< 6,5
	2	40	350	< 5
	3	40	400	< 5,5
	3	40	450	< 5

Pipes maximum lengths are subjected to technical evaluation and must meet the requirements of the prevailing installation standards in the country.
